## Growth hormone treatment of adults: Content

	Page
Acknowledgements	3
<b>Content</b>	5
<b>Introduction</b>	13
My growth hormone deficiency started at age 31	10
<b>Growth hormone: important information</b>	17
• Roles of growth hormone	18
• Detectable growth hormone levels mainly at night	18
• Production of growth hormone	19
• Production and levels of growth hormone decline with age	20
• Growth hormone works in part by stimulating the production of IGF-1	20
• Controversies regarding growth hormone	21
• Growth hormone is a treatment not only for kids but also for adults	22
<b>Frequency of growth hormone deficiency in adults</b>	23
• Controversies about the frequency of growth hormone deficiency in adults	24
• The real frequency: growth hormone deficiency starts at ages 30–35	25
<b>Growth hormone treatment: Benefits</b>	29
• Growth hormone treatment improves fitness, the quality of life, and recovery	30
• Growth hormone treatment improves health	31
• Growth hormone treatment may prevent or reverse mental, psychological, and sleep disorders	32
• Growth hormone treatment stimulates the mind and memory	32
○ Memory loss, cognitive dysfunction	32
○ Alzheimer's disease and other dementias	32
• Growth hormone treatment improves psychological and psychiatric disorders	33
○ Psychological complaints	33
○ Mental distress, low stress resistance	33
○ Anxiety	34
○ Depression	34
• Growth hormone treatment improves sleep	35
<b>Growth hormone treatment may improve the physical appearance, rejuvenating older adults</b>	36
• Aging of the face and body	36
• Thinning skin	36
• Reproductive system	36
• Sexuality	36
• Decline of organ functions	36
• Mechanisms by which growth hormone may attenuate aging	37
<b>Growth hormone treatment may prevent or reverse physical diseases</b>	38
• Growth hormone treatment can reduce the risk of disease	38

• Age-related muscle loss (sarcopenia)	38
• Overweight and obesity	38
• Type 2 diabetes	39
• Osteoporosis	39
• Bone fractures	39
• Lipid disorders (total cholesterol, LDL-cholesterol, triglycerides, homocysteine)	40
• Atherosclerosis	40
• Arterial hypertension	40
• Thrombosis (blood clots) and stroke	40
• Low heart function, heart failure	40
• Coronary heart disease, heart attacks (myocardial infarction)	41
• Adverse cardiovascular disease	41
• Low immune function, infections	41
• Inflammatory bowel disease	42
• Cancer	42
<b>Growth hormone treatment may help to live longer</b>	43
• The risk of dying	43
<b>I. Diagnosis of growth hormone deficiency</b>	45
<b>How does one detect GH deficiency in adults?</b>	46
<b>1. Medical history</b> of growth hormone deficiency	48
<b>2. Complaints</b> of growth hormone deficiency	50
2a. Psychological complaints	50
2b. Physical complaints	52
Patient questionnaires	53
• Short self-evaluation questionnaire for the patient's curiosity	54
• Longer questionnaire for evaluation by the physician	55
<b>3. Physical signs</b> of growth hormone deficiency	56
• Physical signs	56
• Pictures of physical signs of growth hormone deficiency	57
<b>4. Causes or aggravating factors of growth hormone deficiency</b>	63
4a. Lifestyle factors	63
4b. Dietary factors	64
Lifestyle and diet questionnaire	65
<b>5. Laboratory tests</b> for growth hormone	67
• IGF-1	67
• IGF-BP-3	67
• IGF-1/IGFBP-3 ratio	67
• (GH stimulation tests)	68
• (24-hour urine GH)	69
<b>Interpretation of the laboratory tests</b>	70
• Laboratory reference ranges	70
• Make it yourself easy: retain optimal levels	69
• Optimums of serum IGF-1, IGFBP-3, and IGF-1/IGFBP-3 ratios	72
• Ranges of deficient, healthy and excessive levels of serum IGF-1, IGFBP-3, and IGF-1/IGFBP-3 ratios	73

• Health and disorder zones of serum IGF-1 levels	75
• Premature aging and earlier death	76
• Mental, psychological, sleep, and sexual disorders	77
• Functional disorders	77
• Cerebro- and cardiovascular disorders	78
• Musculoskeletal and inflammatory disorders	78
• Overweight and diabetes disorder	79
• Practical examples: very low, low-normal, and healthy serum IGF-1 levels	80

<b>II. Adult growth hormone treatment</b>	83
• <b>Indications</b> for growth hormone treatment	84
• <b>Contraindications</b> for growth hormone treatment	84
<b>1. Natural growth hormone boosters</b>	85
• Improve the lifestyle	86
• Improve the diet	86
• Take nutritional supplements	87
• Take other growth hormone secretagogues	89
• Conclusion regarding natural boosters	91
• Other hormone treatments	92
<b>2. Growth hormone treatment of adult growth hormone deficiency</b>	93
• Injectable growth hormone preparations	93
• How to inject growth hormone?	95
• How to start growth hormone treatment?	96
- Majority of cases: start at low doses	96
- Emergencies: use high doses	98
<b>Progress</b> with growth hormone treatment	99
<b>III. Follow-up during growth hormone treatment</b>	101
• Timing of follow-up: when to come back for follow-up?	102
<b>1. Check growth hormone complaints</b> by a growth hormone questionnaire and direct interview	103
• Direct interview	103
• Growth hormone follow-up questionnaire	103
<b>2. Follow-up physical examination</b>	105
• Check for physical signs of growth hormone deficiency	105
• Pictures of physical improvements with growth hormone treatment	107
• Check for physical signs of growth hormone overdose	111
• Pictures of physical signs of growth hormone overdose	112
• Check whether the therapeutic trial is successful	114
<b>3. Follow-up laboratory test results</b>	115
• Interpretation of the lab test results: worse, no change, insufficient improvement, sufficient improvement, overdose	116
• How high should the serum IGF-1 level be?	117
<b>4. GH dose adjustment to the optimal dose</b>	118
• Conditions that require an increase in GH dose	118
• Conditions that require a reduction in GH dose	118
<b>Possible problems during GH treatment</b> and how to solve them	121
• Problems due to an excessive growth hormone dose	122
• Problems caused by growth hormone treatment's stimulation or reduction of other hormone activities	124
<b>Conclusion</b> on growth hormone treatment in adults	129

<b>Frequently asked questions</b>	131
<ul style="list-style-type: none"> <li>Should every middle-aged or older adult take growth hormone treatment because its production declines so quickly during adulthood?</li> </ul>	132
<ul style="list-style-type: none"> <li>Is growth hormone treatment for adults scientifically based?</li> </ul>	132
<ul style="list-style-type: none"> <li>Can exercise improve GH and/or IGF-1 levels and be a valuable alternative to GH treatment?</li> </ul>	133
<ul style="list-style-type: none"> <li>Can meditation help improve growth hormone's level?</li> </ul>	133
<ul style="list-style-type: none"> <li>Can taking other hormone treatments stimulate the GH secretion?</li> </ul>	134
<ul style="list-style-type: none"> <li>Once one starts with growth hormone, is it forever? Can patients ever stop the treatment without risking a worse condition?</li> </ul>	134
<ul style="list-style-type: none"> <li>Can growth hormone treatment weaken and damage the pituitary gland (that secretes growth hormone), so that once you start, you are forever dependent on the treatment and never can stop anymore?</li> </ul>	134
<ul style="list-style-type: none"> <li>Can taking GH treatment make me addicted to it, and progressively more dependable on it?</li> </ul>	135
<ul style="list-style-type: none"> <li>What happens when I stop GH treatment?</li> </ul>	135
<ul style="list-style-type: none"> <li>Shouldn't only tiny doses of GH treatment, such as 0.01 to 0.05 mg per day, be given to adults to avoid taking any risks with GH treatment?</li> </ul>	134
<ul style="list-style-type: none"> <li>How can growth hormone treatment be made safer and more efficient?</li> </ul>	137
<ul style="list-style-type: none"> <li>Where are the best places to inject growth hormone?</li> </ul>	137
<ul style="list-style-type: none"> <li>How to transport growth hormone during travels by airplane, train, or car?</li> </ul>	138
<ul style="list-style-type: none"> <li>Is a GH vial or cartridge still valid if I accidentally leave it out of the refrigerator at room temperature for 24 hours, or is it best to throw it away?</li> </ul>	138
<ul style="list-style-type: none"> <li>I inadvertently refrigerated my vial or cartridge of growth hormone in the deepfreeze but the vial and cartridge has not broken, can it still be used?</li> </ul>	138
<ul style="list-style-type: none"> <li>Is a growth hormone solution that looks cloudy with little white strings floating in it still good?</li> </ul>	139
<ul style="list-style-type: none"> <li>Can I mix growth hormone with other watery (water-soluble) hormone treatments I need, to inject myself only once per day?</li> </ul>	139
<ul style="list-style-type: none"> <li>What to do when a bruise appears each time growth hormone is injected?</li> </ul>	139
<ul style="list-style-type: none"> <li>Can growth hormone treatment cause diabetes?</li> </ul>	140
<ul style="list-style-type: none"> <li>Can growth hormone be taken during a disease?</li> </ul>	141
<ul style="list-style-type: none"> <li>Can growth hormone be taken during in vitro fertilization procedures to improve fertility?</li> </ul>	142
<ul style="list-style-type: none"> <li>Can growth hormone be taken during pregnancy?</li> </ul>	142
<ul style="list-style-type: none"> <li>Should women stop taking birth control pills to maintain growth hormone activity?</li> </ul>	142
<ul style="list-style-type: none"> <li>Can growth hormone treatment enlarge the hands, nose, chin, face, and feet?</li> </ul>	143

• Can growth hormone treatment increase the risk of cancer?	143
• Can growth hormone be taken after cancer?	144
• Why might it be interesting to provide GH treatment to some cancer patients after removal of their tumor?	145
• Must growth hormone treatment be prescribed by a physician?	147
• Where can I find a physician who can treat me with growth hormone?	147
• Do medical insurance companies reimburse the costs of treatment for patients with adult growth hormone deficiency?	147
• Is growth hormone therapy for adults legal?	149
• How to legally prescribe growth hormone treatment for adults in the US?	149
• How to demonstrate legally in the US a growth hormone deficiency in an adult?	150
• What about the guideline for the diagnosis of growth hormone deficiency in adults established by some medical scientific societies, which considers serum IGF-1 levels between 0 and 84 µg/L as growth hormone deficient and an indication to provide growth hormone treatment?	152
• Can physicians encounter problems with medical boards when they prescribe growth hormone therapy in adults?	153
